

Light. Strong. Resilient. Just like Matthew...

KINDER**K**

BULK MATERIALS HANDLING PRODUCTS

'Back injuries account for about one-third of all workers compensation costs and one-third of all workplace injuries'

Federal Government - Department of Employment & Workplace Relations (Office of the Australian Safety & Compensation Council)

Features

- **50% less weight than steel**
- Belt friendly
- Quiet
- Will not rust
- Wear resistant
- UV resistant
- Less carryback
- Effective Sealing arrangement
- Interchangeable with existing rollers
- Fast delivery
- Competitive price to steel rollers

K-Polymer Conveyor Rollers

Providing Innovative Bulk Handling Solutions To Local and Global Markets Since 1985

FAQs

Why the need for lightweight rollers?

Lugging steel rollers up steep conveyor gantries and then manoeuvring them under structures into awkward positions, invites trouble. This kind of twisting action can eventually take its toll on people's backs.

How light is light?

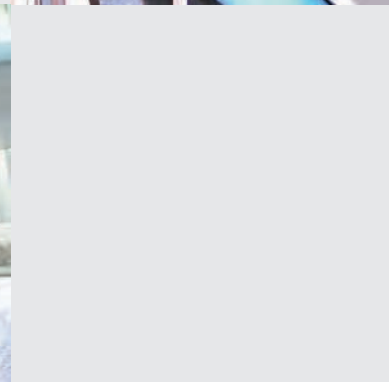

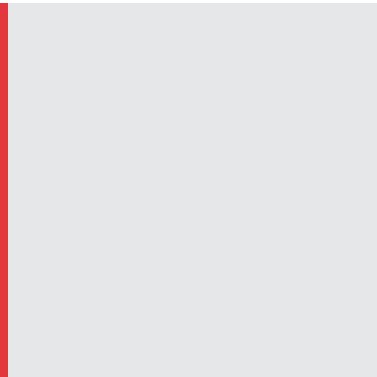

K-Polymer conveyor rollers are half the weight of steel shell rollers. This means maintenance crews can position them with far greater ease and with less risk of personal injury.

How robust are K-Polymer rollers?

The K-Polymer conveyor rollers are, literally, a new generation product. They are, in all respects, a heavy duty alternative to a steel shell roller, and just as robust. In fact, although the roller is lightweight, it is engineered using modern, glass-filled fibre, high density, polyethylene (HDPE) materials to substantially outlast steel.

What testing has been carried out to back up claims?

Abrasive loss testing to compare shell life concluded 2-to-1 in favor of K-Polymer over steel. Noise testing concluded a 10 dBA reduction. Official test results available on request.
